

Case Study – Barnet

Working with a leading London residential development specialist our specialist team designed, manufactured and installed a number of bespoke shuffle glazed screens to this extension and renovation project.

To achieve the clean aesthetics a specialist perimeter channel frame was designed with the detail recessed into the surrounding finishes all to create a frameless appearance.

Further adding to the frameless aesthetic was the inclusion of stepped edge double glazed units at all corner details, negating the need for internal support. The two large facades were supplied with Schuco ADS open door set installed flush with the surrounding glass and painted black to minimise the sightlines of the frame. The main glass units were supplied in a toughened/laminated specification giving them greater resistance to wind loading removing the need for vertical support and a Burglar resistance rating of P4A to EN356.
