

Case Study – St Nicholson Shopping Centre

Following a number of successful glass changing and seal replacements by our sister refurbishment Company “GLAZING REFURBISHMENT” Cambs Glass was approached by the centre management to supply a price for the replacement of an existing barrel vaulted rooflight with a more modern rooflight offering greater thermal solar, and noise control over the existing single glazed structure.

Our sales team and technical teams works closely with the centres agent to produce a specification and design which meet the centres requirement whilst offering a cost effective building cost and minimise the cost of future maintenance.

The rooflight strip out and replacement was carried out during normal working hours using a crash deck scaffold mounted off of the main roof steelwork, this allowed us to maintain the clients floor areas for trading’s apart form a single staircase access tower. The rooflight was replaced with a thermally broken pressure equalised patent glazing system, with an inbuilt drainage system, The glass units where then retained with an external pressure plate and cover cap system.

Find out more about this project our one of our other projects by contacting our sales team on 01638 640038 or on info@cambsglass.co.uk.
